### Medium Term Stability

Frequency stability measurement procedure according the COSPAS/SARSAT T.001

- Note #1:  $T_{min}$  = -40 °C (Class 1 beacon)
- $T_{min}$  = -20 °C (Class 2 beacon)
- $T_{ON}$  = beacon turn-ON time after 2 hours “cold soak”
- $T_{meas}$  = start time of frequency stability measurement ( $T_{ON} + 15 \text{ min}$ )

Note: #2: The 2h and 1h warm-up and stabilisation times are for type approval test of complete beacon. For testing of TCXO these times may be shortened accordingly.
